

Description

Q-Tech QTV700 Series Space Qualified, 100kRad(Si) Tolerant Hybrid Oscillators are Class 2 Hybrids per MIL-PRF-55310. These CMOS and Sine Wave VCXOs are hermetically sealed in a 24 pin Double Dual In-Line, 24 pin Flat-Pack .975" x 1.275", or 32 pin Flat-Pack 1" SQR, and operate over a variety of voltages and temperature ranges.

Features

- Made in USA
- Hermetically sealed packages
- Supply voltage 3.3Vdc, 5.0Vdc, 12.0Vdc, and 15.0Vdc
- Temperature range -55°C to +125°C
- Screened and Quality Conformance Inspection to MIL-PRF-55310
- CMOS & Sine Wave outputs
- 100k(Si) Radiation tolerant
- Low phase noise and jitter
- NEW: Low Noise option for even lower phase noise on our Sine Wave output VCXOs.

Packaging Options

Standard ESD packaging

EAR Destination Control Statement

This product and related technical data are subject to the EAR as promulgated and implemented by the U.S. Department of Commerce Bureau of Industry and Security. This product and related technical data are controlled under Export Control Classification Number (ECCN) 9A515.e.1 of the Commerce Control List (CCL), and may not be exported, reexported, or re-transferred outside of the U.S. or released or disclosed to Foreign Persons, as defined by the EAR, without first complying with all applicable U.S. Export Regulations.

(*) See Page 2 for packages and output logic frequency ranges.

(**) Variations from standard specification are available, please contact factory. Consult factory for stability and pulling options for low noise option L.

QTV700 Series

Space Qualified Voltage Controlled Crystal Oscillators 3.3Vdc, 5.0Vdc, 12.0Vdc, and 15.0Vdc - 2MHz to 350MHz

1 **PURPOSE**

1.1 The purpose of this Detail Specification Control Drawing (SCD) is to describe the specific quality and reliability requirements for a voltage controlled crystal oscillator (VCXO).

2 SCOPE

2.1 This specification establishes the minimum detail requirements for a low profile hybrid, hermetically sealed, Type 2, Class 2 (reference MIL-PRF-55310) VCXO.

3 PART PROTECTION AND SAFETY

3.1 These items are susceptible to breakdown damage resulting from electrostatic discharge. Every precaution shall be taken while handling, installing, and testing the parts to prevent static charge. Care should be exercised to not apply more than rated voltage or current to any terminal/pad during testing.

4 **PART NUMBER**

4.1 The Q-Tech Part Number shall be as specified in Ordering Information (Page 1).

5 APPLICABLE DOCUMENTATION & REFERENCES

5.1 The following documents form a part of this drawing to the extent specified or modified herein.

5.2 Military & Industry

- 5.2.1 MIL-PRF-55310, Oscillator, Crystal Controlled, General Specification for
- 5.2.2 MIL-PRF-38534, Microcircuit Manufacturing, General Specification for
- 5.2.3 MIL-PRF-38535, Integrated Circuits, (Microcircuits) Manufacturing, General Specification for
- 5.2.4 MIL-PRF-19500, Semiconductor Devices, General Specification for
- 5.2.5 MIL-STD-202, Test Methods for Electronic and Electrical Component Parts
- 5.2.6 MIL-STD-883, Test Methods and Procedures for Microelectronics
- 5.2.7 MIL-STD-1686, Electrostatic Discharge Control Program for Protection of Electrical and Electronic Parts, Assemblies and Equipment

5.3 **<u>Q-Tech</u>**

5.3.1 Form F1221, Definitions for Hybrid Product Development Levels

5.4 Application of Documents

5.4.1 **Issue of Documents**

Document revisions in effect on the date of the customer purchase order form a part of this drawing except as modified herein.

5.4.2 **Order of Precedence**

In the event of conflict between this document and the references cited herein or other requirements, the precedence in which requirements shall govern, in descending order, is as follows:

- a) Applicable Customer Purchase Order
- b) Applicable Customer Detail SCD and/or Detail Drawing
- c) Applicable Q-Tech Corporation Detail SCD/Drawing
- d) Applicable Q-Tech Corporation General SCD
- e) Other Specifications, Standards, and Documentation Referenced Above

5.4.3 Customer Purchase Order Special Requirements

Additional special requirements shall be specified in the applicable customer purchase order when additional requirements or modifications are needed for compliance to special programs or product line compliance. Unique identification of the items produced may be required.

5.4.4 General Specification Control Drawing

Any reference to the "general specification" or "general SCD" refers to the Q-Tech Corporation General Specification Control Drawing cited in the Applicable Documentation and References section, unless otherwise specified.

6 **REQUIREMENTS**

6.1 General Definition

The VCXO is a high reliability signal generator that provides a sine-wave or CMOS output. The VCXO has been designed to operate in a spaceflight environment with an expected lifetime in excess of 15 years. Life time is defined as the sum of operational and storage environments

6.2 Electrical Characteristics

The electrical characteristics shall be as specified in Table II and Table III.

6.3 Absolute Maximum Rating

The absolute maximum ratings shall be as specified in Table I.

6.4 **Physical Characteristics**

6.4.1 **Dimensions**

The VCXO outline dimensions and terminal connections shall be as shown on Page 2.

6.4.2 Weight

The VCXO shall weigh less than or equal to 25 grams.

6.4.3 Materials

The VCXO package body and lead finish shall be gold in accordance with MIL-PRF-38534.

6.5 **Design and Construction**

The design and construction of the crystal oscillator shall be as specified herein. As a minimum, the oscillators shall meet the design and construction requirements of MIL-PRF-55310, except element evaluation shall be as specified in 6.5.

6.5.1 All piece parts shall be derived from lots that meet the element evaluation requirements of MIL-PRF-38534, Class K, with the following exceptions:

6.5.1.1 Active elements

a) Visual Inspection of Silicon on Sapphire Microcircuits

Semicircular crack(s) or multiple adjacent cracks, not in the active area, starting and terminating at the edge of the die are acceptable. Attached (chip in place) sapphire is nonconductive material and shall not be considered as foreign material and will be considered as nonconductive material for all inspection criteria.

b) Subgroup 4, Scanning Electron Microscope (SEM) Inspection

The manufacturer may allow the die distributor, at his option, to select two (2) dice from a waffle pack (containing a maximum quantity of 100 die), visually inspect for the worst case metallization of the 2 dice, and take SEM photographs of the worst case.

c) Subgroup 5 Radiation Tests

Subgroup 5 radiation tests are not required unless otherwise specified in the detail purchase order.

6.5.2 Processes

Processes used for manufacturing the VCXO are selected on the basis of their ability to meet the quality requirements for space High Reliability manufacturing. Travelers or Process Cards are used in the manufacturing and testing of all of the VCXO Series, and might be available for customer review. Copies of these Travelers can be provided with the VCXOs at time of shipment if so specified on the purchase order.

6.5.3 Interchangeability

Each VCXO shall be interchangeable without using a special selection process.

6.5.4 **Product Marking**

Each unit shall be permanently marked with the manufacturer's name or symbol, part number, lot date code number, and serial number. The unit shall be marked with the outline of an equilateral triangle near pin 1 to show that it contains devices which are sensitive to electrostatic discharge.

6.6 Parts Program

Devices delivered to this specification represent the standardized Parts, Materials and Processes (PMP) Program developed, implemented and certified for advanced applications and extended environments.

6.6.1 Quartz Crystal Resonator

The crystal resonator used shall be constructed using a 4-point mount premium synthetic swept Quartz and procured to Q-TECH SCD. (For the Breadboard and Engineering models, non-swept quartz may be used. See Q-Tech Form F1221, Definitions for Hybrid Product Development Levels).

6.6.2 Sine-Wave Active Devices

Radiation testing is not performed at the oscillator level, but these VCXOs have been acceptable for use in environments up to 100k rads by analysis of the components used. ONLY Bipolar semiconductors are employed in the design. This device is specified to be radiation tolerant to 100 kRad(Si) total ionizing dose (TID).

6.6.3 **CMOS Active Devices**

Radiation testing is not performed at the oscillator level, but these VCXOs have been acceptable for use in environments up to 100k Rads by analysis of the components used. This device is specified to be radiation tolerant to 100 kRad(Si) total ionizing dose (TID). The microcircuit in this part shall use CMOS technology and shall be from a wafer proven to be radiation tolerant to 100kRad(Si) total ionizing dose.

6.6.3.1 CMOS Microcircuit Usage

For output frequencies below 14MHz, the output microcircuit shall be 54AC74, see DSCC SMD 5962-88520. For frequencies greater than or equal to 14MHz, the CMOS microcircuit shall be 54AC00, see DSCC SMD 5962-87549. These microcircuits are specified to be Single Event Latchup Free for LET up to 93 MeV-cm²/mg. For QTV702, QTV712, and QTV722 devices above 70MHz, the manufacturer shall be National Semiconductor Corporation, otherwise the manufacturer shall be ST Microelectronics Corporation.

6.6.4 **Prohibited Materials**

Materials containing more than 97% tin and materials containing measurable amounts (by common nondestructive test methods) of selenium, cadmium, or mercury shall not be used as plating, coating or base materials in the construction of parts or components. Zinc is only acceptable as an alloying element and alloys containing zinc must be covered by suitable protective plating (e.g. nickel plating). Inert oxides of the above materials are allowed.

6.7 **Traceability Requirements**

Material, element and process traceability requirements shall be as specified by MIL-PRF-38534 for Class K hybrids.

6.8 <u>Data</u>

6.8.1 **Design Documentation**

When required by the purchase order, design, topography, process and flow charts for all assembly/inspection and test operation for devices to be supplied under this specification on the initial procurement shall be established and shall be available in-plant for review by the procuring activity upon request. This design documentation shall be sufficient to depict the physical and electrical construction of the devices supplied under the specification and shall be traceable to the specific parts, drawings or part type numbers to which it applies, and to the production lot(s) and inspection lot codes under which devices are manufactured and tested so that revisions can be identified.

6.8.2 Technical Data Package

When required by the purchase order, the following design documentation and information is deliverable 30 days prior to the start of production. The Technical Data Package shall consist of the following: a) Assembly drawing(s).

b) All electrical schematics and drawings not considered proprietary.

c) The assembly and screening travelers to be used on-line to manufacture the devices supplied to this specification.

- d) Parts and materials list.
- e) Element evaluation data confirming compliance with MIL-PRF-38534, Class K, and Prohibited Materials paragraph 3.4.3

6.9 <u>Test Report</u>

6.9.1 A test report is supplied with each shipment of oscillators and includes the following information, as a minimum:

a) A Certificate of Conformance to all specifications and purchase order requirements. As a minimum, the Certificate of Conformance shall include the following information:

- 1) Purchase order number.
- 2) Applicable part number.
- 3) Manufacturers lot number.
- 4) Lot date code.
- b) Parts and materials traceability information.
- c) Certificate of crystal sweeping.
- d) Manufacturing lot traveler.
- e) Screening attributes and variables data as applicable.
- f) Quality conformance inspection attributes and variables data as applicable.
- g) Radiographic inspection negatives.

6.10 Non-Flight Oscillators

Unless otherwise specified in data sheet, the general requirements for non-flight hardware (Breadboard and Engineering models) shall be defined in F1221, Definitions for Hybrid Product Development Levels.

6.11 Screening

Screening tests shall be in accordance with Table IV.

6.12 **Quality Conformance Inspection (QCI)**

Quality conformance shall be as specified herein. All records shall be traceable to the lot number and unit serial number. Samples used for Group A that pass all tests may be delivered on contract.

6.12.1 Oscillator Group A Inspection

Group A testing shall be in accordance with Table V. Group A inspection shall be performed on units that have passed the screening tests. All electrical performance tests of this specification shall be performed during Group A with the exception of any tests performed as part of the final electrical testing during 100 percent screening.

6.12.2 Oscillator Group B Inspection

Group B inspection shall be in accordance with Table VI.

- 6.12.3 Oscillator Group C Inspection
 - Group C inspection shall be in accordance with Table VII.

6.13 Destructive Physical Analysis (DPA)

A DPA may be performed on each lot of devices in accordance with MIL-STD-883, Method 5009. The DPA shall be performed by the customer.

TABLE I - MAXIMUM RATINGS

| PARAMETER | SYMBOL | MINIMUM | MAXIMUM | UNITS |
|-------------------------------------|---------------|---------|---------|-------|
| Supply Voltage (QTV7X1, 7X2, & 7X4) | Vs | 0 | 6 | V |
| Supply Voltage (QTV7X5 or QTV7X6) | Vs | 0 | 16.5 | V |
| Operating Temperature Range | Тс | -55 | +125 | °C |
| Storage Temperature | Tstg | -65 | +125 | °C |
| Lead Solder Temperature/Time | | | +250/10 | °C/s |
| Package Thermal Resistance | θ_{JC} | | 50 | °C/W |

TABLE II - ELECTRICAL PERFORMANCE CHARACTERISTICS (CMOS)

| ELECTRICAL | | | LIMITS | | | |
|---------------------------------|----------------------|--|----------------|----------|-------------------------------------|--------|
